

HOW HOT IS TOO HOT FOR YOUR DOG??

Many people love the warm temperatures during the summer months. Be sure to consider the health and well-being of your dog before taking them into the heat.

DID YOU KNOW?

A dog's normal body temperature ranges from 101 to 102.5 degrees. Dogs can withstand a body temperature of 107 to 108 degrees for only a very short time period of time before suffering brain damage - or even death. Dogs cannot regulate their body temperatures as quickly as human.

**It's NOT Worth Taking a Chance,
NEVER Leave a Dog in a Car, Not Even for 1 Minute!**

HOW WARM IS THE INSIDE OF YOUR CAR?

On an 85 degrees day, the inside of a car, even if the windows cracked open, can soar to 102 degrees in only 10 minutes!

After 30 minutes, temperatures can top 120 degrees!

If the outdoor temperature is warmer than 85 degrees, internal car temperatures will rise even more quickly.

Our pets are considered part of the family. Don't take the chance of losing them to the heat this summer.
